

Filip Tynell

Malmö - filiptynell@hotmail.com - <https://www.linkedin.com/in/filip-tynell/>

SKILLS

- Software development with C++ and Win32 API.
- Unreal Engine editor tools and pipelines development for AAA games.
- External tools development for AAA games, using .NET, ASP.NET Core, React, TypeScript and Python.
- Unreal Engine source code modifications, engine improvements, optimizations, bug fixes, navigating large code base.
- In-house 3D game engine & real-time rendering, DirectX 11 and HLSL.
- Graphics debugging & performance optimization, using RenderDoc, Unreal Insights, PIX.
- x86/x64 binary protection for PE format including virtualization, anti-debugging, anti-analysis.
- x86/x64 binary reverse engineering & dynamic analysis using assembly, x64dbg, IDA Pro.
- Linear algebra & 3D mathematics – physically based rendering.
- Automated pipeline development – Jenkins & Groovy.

WORK EXPERIENCE

Tools Engineer

Sharkmob - Jan 2025 – Present

- Promoted based on technical abilities and reliability.
- Continued development of tools and pipelines with an increased focus on editor-level optimizations, improving development efficiency across the project.
- Stronger emphasis on code quality and team growth by providing constructive feedback during code reviews.

Junior Tools Engineer

Sharkmob - Aug 2022 – Jan 2025

- Delivered and collaborated on a wide variety of tools and automated pipelines that affect different parts of the project with value to our colleagues and direct impact on the game.

- Strong focus on tools supporting multiple disciplines, including Game Design, QA, Level Design, and Engineering – such as asset editors, debugging utilities.
- Collaborated with a small team of different disciplines to evaluate, develop tools and debugging utilities for RTXGI (Ray-Traced Global Illumination) leveraging rendering and shader expertise in Unreal Engine.

Software Development

Self-Employed (GREYBIT SOFTWARE) – Sep 2015 – Jul 2017

- Explored and applied C++ and Win32 API to design and develop software targeting an identified market gap.
- Explored reverse engineering of games and anti-cheat protections with the intent to break them.
- Built a custom software licensing solution with custom executable protection for public distribution.
- Provided end-user support, including troubleshooting and guidance, gaining experience in customer interaction and problem solving.

EDUCATION

Game Programmer

The Game Assembly, Malmö – Sep 2020 - Apr 2023

Produced 8 game projects in groups with C++, C# & Unity with a strong focus rendering, engine and tools development.
